

Estimating Policy Barriers to Trade

Brendan Cooley

Political Economy Graduate Colloquium

6 December 2018

Free and Fair?

Donald J. Trump ✓

@realDonaldTrump

Follow

The United States must, at long last, be treated fairly on Trade. If we charge a country ZERO to sell their goods, and they charge us 25, 50 or even 100 percent to sell ours, it is UNFAIR and can no longer be tolerated. That is not Free or Fair Trade, it is Stupid Trade!

10:51 AM - 2 Jun 2018

- **Free:** Foreign firms enjoy same market access conditions as domestic competitors
- **Fair:** Barriers that do exist affect all trade partners symmetrically

The United States must, at long last, be treated fairly on Trade. If we charge a country ZERO to sell their goods, and they charge us 25, 50 or even 100 percent to sell ours, it is UNFAIR and can no longer be tolerated. That is not Free or Fair Trade, it is Stupid Trade!

10:51 AM - 2 Jun 2018

- **Free:** Foreign firms enjoy same market access conditions as domestic competitors
- **Fair:** Barriers that do exist affect all trade partners symmetrically

The Tariff System (GATT/WTO)

- **Free?** Applied tariff rates are low, ~5% on average (Baldwin 2016)
- **Fair?** WTO members (vast majority of world economy) commit to principle of non-discrimination (Most Favored Nation)

Varieties of Barriers

Direct

- Tariffs
- Non-Tariff Measures (NTMs)
 - Price controls, quotas, health and safety regulations, technical barriers
 - Mansfield and Busch (1995), Lee and Swagel (1997), Gawande and Hansen (1999), Kono (2006), Rickard (2012), Maggi, Mrázová, and Neary (2018)

Indirect (Behind-the-Border)

- Government procurement
 - Evenett and Hoekman (2004), Kono and Rickard (2014)
- Subsidies
- Excise taxes
- Regulations

Effective Discrimination: Target trade-disorting instruments to disproportionately affect disfavored trading partners.

- E.g. high agricultural duties by developed countries disproportionately harm developing countries

Varieties of Barriers

Direct

- Tariffs
- Non-Tariff Measures (NTMs)
 - Price controls, quotas, health and safety regulations, technical barriers
 - Mansfield and Busch (1995), Lee and Swagel (1997), Gawande and Hansen (1999), Kono (2006), Rickard (2012), Maggi, Mrázová, and Neary (2018)

Effective Discrimination: Target trade-disorting instruments to disproportionately affect disfavored trading partners.

- E.g. high agricultural duties by developed countries disproportionately harm developing countries

Approach

Trade Costs: Policy distortions and transportation costs to access market i in excess of those faced by firms in country i

Overview

1. Build model of international economy subject to trade costs (Eaton and Kortum 2002)
2. Derive structural relationship linking trade costs to price levels, trade flows, market shares of home producers
 - Anderson and Van Wincoop (2003), Waugh (2010), Simonovska and Waugh (2014), Spasi (2015), Waugh and Ravikumar (2016)
3. Decompose trade costs into economic (transportation costs) and political (policy barriers) components
4. Model transportation costs, combine with data on variables in (2) to separately estimate magnitude of policy barriers

$\tau_{ij} - 1 \geq 0$ - ad valorem tariff equivalent of policy barriers country i imposes on country j

National Income and Ad Valorem
Tariff Rates, 2005

National Income and Structural
Trade Restrictiveness, 2004

Model Intuition

- N countries $i \in \{1, \dots, N\}$ with representative consumers
 - Value C-D mixture of tradable goods and nontradable services
 - Earn wage w_i for every unit of labor endowment L_i supplied
- Competitive economy, stochastic technology
 - Production requires labor and bundle of intermediate inputs

Structural Relationship

$$d_{ij} = \left(\frac{\lambda_{ij}}{\lambda_{jj}} \right)^{-\frac{1}{\theta}} \frac{P_i}{P_j} \quad (1)$$

- d_{ij} - trade costs
- λ_{ij} - share of j 's producers in i 's market
- λ_{jj} - share of j 's producers in home market
- P_i - price level of tradables
- θ - trade elasticity

Freight Costs (II)

Results

Magnitude of Policy Barriers

- **Free?** Average policy barrier equivalent to 284 percent import tariff ($\tau = 3.84$)
- **Fair?** Within-country standard deviation of τ_{ij} is 1.72

Distribution of Policy Barriers

Trade Restrictiveness and Market Access (I)

Trade Restrictiveness Index

$$TRI_i = \frac{1}{\sum_{j \neq i} E_j} \sum_{j \neq i} \tau_{ij} E_j \quad (13)$$

Market Access Index

$$MAI_j = \frac{1}{\sum_{i \neq j} E_i} \sum_{i \neq j} \tau_{ij} E_i \quad (14)$$

Trade Restrictiveness, 2004

Conclusion

State Capacity and Protectionism

- Tariffs as “second-best” solution to revenue-raising problem facing low-capacity governments
 - Acemoglu (2005), Rodrik (2008), and Queralt (2015)
- Developing (more autocratic) world not necessarily more “welfare-conscious” than developed counterparts
 - Milner and Kubota (2005), Gawande, Krishna, and Olarreaga (2009); Gawande, Krishna, and Olarreaga (2015)

Development and Trade Discrimination

- Growth causally linked to market access conditions abroad (Romalis 2007)
- Lack of market access by developing countries may hinder development prospects
 - Redding and Venables (2004), Romalis (2007), Waugh (2010)

International trading system neither free nor fair – and developing world bears brunt of inequality

Freight Cost Model

- Products $m \in \{1, \dots, M\}$
- Transportation modes $k \in \{1, \dots, K\}$
- ζ_{ij}^{mk} share of product m transported by mode k

Mode and Cost Functions

$$g : \{\mathbf{Z}_{ij}, d^m\} \rightarrow \delta_{ij}^{mk}$$

$$h : \{\mathbf{Z}_{ij}, d^m\} \rightarrow \zeta_{ij}^{mk}$$

Aggregate Freight Costs

$$\hat{\delta}_{ij}(\mathbf{Z}_{ij}, \mathbf{d}_{ij}) = \frac{1}{X_{ij}} \sum_{m=1}^M x_{ij}^m \sum_{k=1}^K g(\mathbf{Z}_{ij}, d^m) h(\mathbf{Z}_{ij}, d^m)$$
